## FLOOR GRIDS

IN.1

Floor grid is made of quality, corrosion resistant steel plates and resistant to chemical means.

It consists of the frame and grid, and it is simple to take-down and clean, as well as a very good permeability of liquid waste.

Production program has floor grids with dimensions 100x100mm, 120x120mm, 150x150mm.

## SIPHONS

## SIPHONS

Siphon is beside grid, constituent part of the drainage and it's basic function is that, by system of siphoning, prevents the flow of unpleasant smells from sewerage system; and also to keep bigger pieces of filth in siphon's vessel. In siphon's vessel a large quantity of liquid is stored and that enables drainage, which could lead to loss of it's basic function. Cleaning procedure of the vessel is quite simple.

They are produced on machines for injection pressing of plastomer and they are intended for standard sewerage pipes, diameter Ø50mm. Siphons can be divided into 2 groups: with vertical and with horizontal outlets. They can be fitted-in to "thin" floors.

All floor grids from our production program is compatible with siphons (except floor grid IN.1.1. and IN.1.8).

## BATHTUB DOORS

IN.2

Bathtub doors consists of frame and the cover and they are completely made of high quality, corrosion resistant steel plates and resistant to chemical means.

By designing solution, it is provided easy opening and fitting-in of the cover, and sealing prevents the entrance of unpleasant smells into the room.

Production program includes a very large range of dimensions, adjusted to the dimensions of tiles which can be found in the market.
